HARVEST HR45 EXTRA LOAD

SELF PROPELLED SPRAYER

480/80R50 HR45 EXTRA-LOAD

Choosing Australian Engineered Harvest Tyres for my Self-Propelled Sprayer OE fitment

Ben Heinrich is a spray contractor based on the Yorke Peninsula in South Australia.

After attending a farmer's information night at Kadina Tyres (Kadina, SA) he was impressed by the self-propelled sprayer relevant design features of the Harvest Tyres HR45.

Having recently placed an order for a Hardi Saritor 62 Self-Propelled Sprayer, Ben decided to request Harvest 480/80R50 HR45 Extra Load Tyres be fitted in place of the generic OE fitment.

Ben has now completed 600 hours contract spraying on the Yorke Peninsula, putting his Harvest Tyres to the test on several farms and seeking feedback from his clients.

A number of these farmers have since provided Ben with positive feedback on their soil observations which included:

- 🌿 **Less crop lie down from wheel tracks**
- 🌿 **Less lug penetration which means less soil compaction**
- 🌿 **Which resulted in an overall healthier and more productive soil post heavy vehicle pass**

Ben has observed that Harvest Tyre's extra lug design has helped to overcome some of the soil compaction issues that are experienced in such high load, high-speed applications.

Driver observations:

- 🌿 **From a ride and feel perspective Ben also mentioned that the sprayer tracks and rides much better than previous brand he has used**
- 🌿 **Ben completes a lot of road transport and he believes that this Harvest Tyre handles the roads well – which he attributes to the HR45's additional lugs**
